Mr. Torres,

With respect to your time, Sir, I will be brief.

I live just a few miles south of the proposed injections wells in Conroe, Montgomery County, Texas and use water from the aquifers that are at risk from the proposed TexCom project.

No one can guarantee with 100% certainty that the toxic waste TexCom proposes to inject at that site will not escape containment and contaminate our ground water. Therefore, I as a landowner, ground water consumer, parent and tax payer, must conclude that there is 100% certainty that the toxic waste will escape containment over time, invade and contaminate our ground water supplies.

That type of man made disaster, effecting millions of Texans, which would eventually cost hundreds of millions of dollars in damages, is UNACCEPTABLE. Today it is AVOIDABLE. After TexCom injects their toxic waste into the ground it is UNSTOPPABLE.

Please do not allow this project to go forward. Protect us from this looming disaster and let TexCom invest in a long term storage strategy for their waste that does put the environment and millions of Texan's lives at risk.

Most sincerely,
Best regards,
Jeff Hinton
